ABOUT US

**Regional IT, the developers of ALMADS, are about to celebrate our 19th anniversary in business!
We have been supporting the Australian and Californian Agricultural Industry most of this time!**

Our qualified System Analysis and Programming staff have over 60 years' experience collectively in the IT profession, servicing a range of clients from very small businesses to large corporate enterprises.

ALMADS is Regional IT's flagship solution, that started from a humble Almond Hulling system to now growing to a full enterprise system that covers most processing and packing operations in an array of commodities and services. Regional IT currently have clients in the following industries:

- Almond Hulling / Shelling, Processing and Packing
- Walnut Hulling / Drying, Sizing, Processing and Packing
- Pistachios Hulling / Drying, Sizing, Processing and Packing
- Macadamia De-husking / Drying, Cracking, Sizing, Processing and Packing
- Rice Drying / Warehousing / Milling
- Olive Processing Grower intake

Some other industries that Regional IT have adapted ALMADS to provide a solution for:

- Cold Storage and Warehousing
- Quarry management and inventory control
- Feed Tracking
- Almond Hull and Shell Trading

ABOUT ALMADS

One of Regional IT's specialties is the development of the Agricultural Logistics, Management and Distribution System (ALMADS), initially developed for the Australian and American nut industries.

ALMADS is a suite of modules that has been developed to efficiently manage food processing companies from a single site, single plant operation to multi-site, multi-plant operations.

ALMADS has so far proven itself to be an integral part of the Ag Processing industries managing Hulling, Shelling, Storage, Drying, Sorting & Packing processes providing tools to improve efficiency and traceability for the whole operation.

The biggest point of difference between ALMADS and most other process management systems is the way data is captured live in the processing plants and using barcode and RFID technology.

Regional IT and ALMADS has also been certified by the State of California (CDFA), Department of Food and Agriculture for weighing and measuring devices which allows us to provide certified Weight Certificates.

Many of our competitors do not have this certification.

OTHER ALMADS FEATURES:

- Incoming Stock Receiving with B2B
- Process Tracking and Food Safety Traceability
- Plant PLC Integration
- Warehousing and Inventory Control
- Ordering and Shipping
- Accounting / ERP System Integration
- Web Portals and Cloud Solutions
- Fully Scalable and Customizable
