## ***Introducing the most effective way to administer jobs for Tradesmen and Contractors.***

ContractIT offers a new and efficient way to administer and direct your tradesmen/contractors from job to job with only a few clicks of a button. Book jobs with site details or let the tradesman fill in the information about the site.

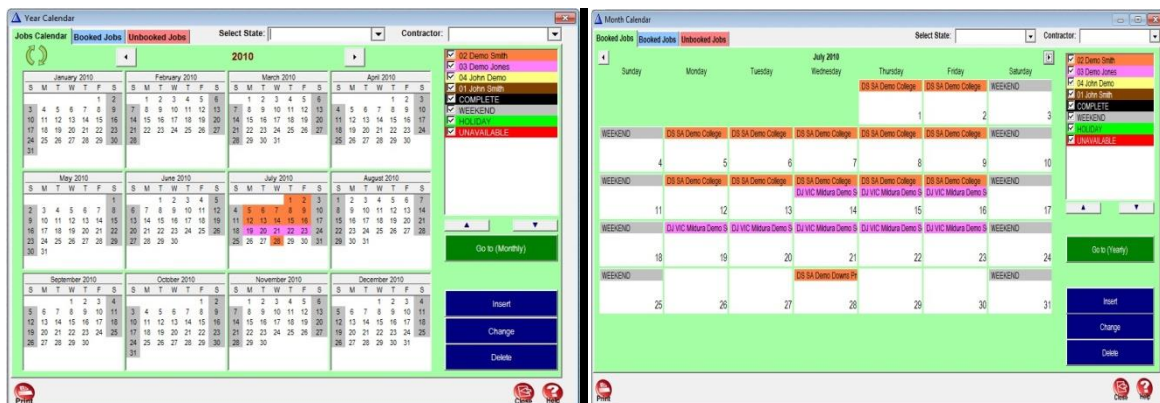

Once you have booked in a job for a tradesman, you can send an email through the system to the tradesman / contractor letting them know there is a job available to them and they will see it when they next log onto the software.

ContractIT minimises down time of your tradesman travelling to and from the office to pick up / drop off job sheets.

Create Job sheets from the head office, input job details, scope of work and materials required for tradesmen to take on site.

ContractIT can also be used by the tradesman to update / input details on the job site or from his / her own home or office, for their jobs only.

View job details by job, day, month and year with an easy glance, colour coded calendar to view jobs for each tradesman/contractor and/or time off for a contractor.

With the tradesman having access to the software they are able to input their own information like “unavailable” dates (holidays), meaning that you will not book out unavailable tradesmen.

The tradesman can only see information regarding their own jobs booked or unbooked, from their end, eliminating any conflicting interests.
